Application for admission to trading on a regulated market or for trading on an MTF

Application will be made for the Notes to be included in the open market of the Stuttgart Stock Exchange (Baden-

Württembergische Wertpapierbörse).

What are the key risks that are specific to the Notes?

Risk factors relating to the structure and pay-off of the Notes

- The Notes will not pay any interest.

Risk factors relating to an Index or Index Basket as reference asset

- Macroeconomic and company-specific Factors having a negative effect on the Performance of the Index may also affect the market price and Redemption Amount of the Notes.
- Certain events in relation to the Index may result in an adjustment or early redemption of the Notes.
- The performance of the Notes will not take into account dividends and other distributions, since they are not reflected in the price of such index.

Risk factors relating to the status of the Notes

- The Notes may be subject to write-down or conversion to equity upon the occurrence of a certain trigger event, which may result in Holders losing some or all of their investment in the Notes (statutory loss absorption).
- In case of an insolvency of the Issuer, deposits have a higher ranking than claims of Holders under the Notes.
- The Notes may be redeemed by the Issuer prior to maturity for regulatory or tax reasons at their early redemption amount which can be zero (i.e. no capital guarantee in such cases).

Risk factors relating to conflicts of interest with regard to the Notes

- Investors are exposed to the risk that direct or indirect actions of the Issuer have negative effects on the market price of the Notes or otherwise negatively affect the Holders and conflicts of interest may make such actions more likely.

Risk factors related to the investment and pricing of the Notes

- The issue price of the Notes may include a margin on the mathematical (fair) market price of the Notes. Since the Issuer will, when determining the price of the securities on the secondary market, also take into account, in particular, the subscription fee (agio), the spread between bid and ask prices as well as commission and other fees in addition to the mathematical (fair) market price of the Notes, the prices quoted by the Issuer may considerably deviate from the fair market price of the Notes.
- Holders assume the risk that the credit spread of the Issuer widens resulting in a decrease in the market price of the Notes.

Risk factors related to the costs associated with and the market in the Notes

- The Notes may have no liquidity or the market for such Notes may be limited and this may adversely impact their market price or the ability of the Holder to dispose of them. Holders are exposed to the risk of wrong assessment of the Notes' liquidity due to the issue size of the Notes.

Date of the underwriting agreement

There is no firm underwriting in relation to the Notes offered.

Indication of the most material conflicts of interest pertaining to the offer or the admission to trading

The Issuer may from time to time act in other capacities with regard to the Notes, such as calculation agent. Such functions may allow the Issuer to calculate the value of the reference asset or (where the reference asset is a basket) to determine the composition of the reference asset, which could raise conflicts of interest where securities or other assets issued by the Issuer itself or a group company can be chosen to be part of the reference asset, or where the Issuer maintains a business relationship with the issuer or obligor of such securities or assets.

The Issuer acts as market maker for the Notes and, in certain cases, the underlying. In the context of such market making activities, the Issuer will substantially determine the market price of the Notes and possibly that of the underlying. The market prices provided by the Issuer in its capacity as market maker will not always correspond to the market prices that would have formed in the absence of such market making and in a liquid market.

The Issuer may from time to time engage in transactions involving the reference asset for its proprietary accounts and for accounts under its management. Such transactions may have a negative effect on the value of the reference asset and consequently upon the market price of the Notes. References to the reference asset shall be deemed to include any of its components of the Index, if applicable.

The Issuer may issue other derivative instruments in respect of the relevant reference asset and the introduction of such competing products into the marketplace may affect the market price of the Notes.

The Issuer may use all or some of the proceeds received from the sale of the Notes to enter into hedging transactions. The Issuer's hedging activities might decrease or increase such market price. The market price of the Notes might in particular be affected by the liquidation of all or a portion of the hedging positions at or about the time of the maturity or expiration of the Notes.

The Issuer may acquire non-public information with respect to the reference asset, and the Issuer does not undertake to disclose any such information to any holder. In addition, the Issuer may publish research reports with respect to the reference asset. Such activities could present conflicts of interest and may affect the market price of the Notes.

The Issuer and its consolidated subsidiaries might employ people with secondary occupations such as executives of management boards or supervisory boards in other companies or within Erste Group. Companies of Erste Group or such other companies might be underlyings of the Notes.
